

My Jupiter Notebook on IBN Watson Studio

Brandon Tijerino Wealth & Investments

the reason why Im taking data science is so I can become a better investor and business man overall, with data science I'll be able to use data and information from various investors & businesses to be able to determine which would be the best choice to make that has the most success and returns. I'm interested in data science because I know that it is a valuable skill that everyone needs to learn as is it used all around us to improve our daily lives.

In the next cell, it will accurately predict my math equation

In [16]: `10 * 10 * 20 - 10`

Out[16]: 1990

Definition list

Is something people use sometimes.

Markdown in HTML

Does **not** work ****very**** well. Use HTML *tags*.

Three or more...

Hyphens

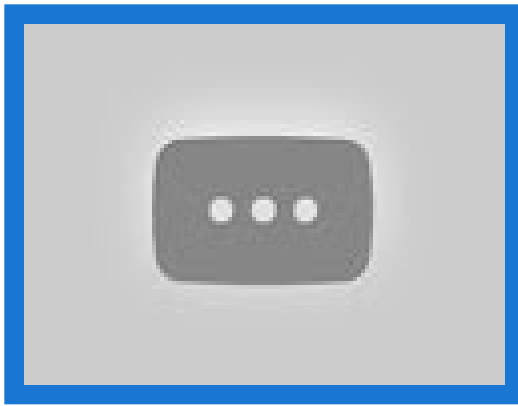

Asterisks

Underscores

Here's a line for us to start with.

This line is separated from the one above by two newlines, so it will be a *separate paragraph*.

This line is also a separate paragraph, but... This line is only separated by a single newline, so it's a separate line in the *same paragraph*.

Blockquotes are very handy in email to emulate reply text. This line is part of the same quote.

Quote break.

This is a very long line that will still be quoted properly when it wraps. Oh boy let's keep writing to make sure this is long enough to actually wrap for everyone. Oh, you can *put* **Markdown** into a blockquote.

Colons can be used to align columns.

Tables	Are	Cool
col 3 is	right-aligned	\$1600
col 2 is	centered	\$12
zebra stripes	are neat	\$1

There must be at least 3 dashes separating each header cell. The outer pipes (|) are optional, and you don't need to make the raw Markdown line up prettily. You can also use inline Markdown.

Markdown	Less	Pretty
<i>Still</i>	renders	nicely
1	2	3

Here is a simple footnote^[^1].

A footnote can also have multiple lines^[^2].

You can also use words, to fit your writing style more closely^[^note].

[^1]: My reference. [^2]: Every new line should be prefixed with 2 spaces.

This allows you to have a footnote with multiple lines. [^note]: Named footnotes will still render with numbers instead of the text but allow easier identification and linking.

This footnote also has been made with a different syntax using 4 spaces for new lines.

```
var s = "JavaScript syntax highlighting";
alert(s);
s = "Python syntax highlighting"
print s
```

No language indicated, so no syntax highlighting.

But let's throw in a **tag**.

```
```var s = "JavaScript syntax highlighting";
```

```
alert(s);s = "Python syntax highlighting"
```

```
print sNo language indicated, so no syntax highlighting in Markdown
```

```
Here (varies on Github).
```

```
But let's throw in a tag.
```

Here's our logo (hover to see the title text):

Inline-style:

Reference-style:

[I'm an inline-style link](#)

[I'm an inline-style link with title](#)

[I'm a reference-style link](#)

[I'm a relative reference to a repository file](#)

[You can use numbers for reference-style link definitions](#)

Or leave it empty and use the [link text itself](#).

URLs and URLs in angle brackets will automatically get turned into links.

<http://www.example.com> or <http://www.example.com> and sometimes [example.com](#) (but not on Github, for example).

Some text to show that the reference links can follow later.
